IBM® Sterling Selling and Fulfillment Foundation Extending the Application

Durata: 4 gg

Descrizione

This 4-day instructor-led course introduces you to the IBM® Sterling Selling and Fulfillment Foundation technical framework. You will learn how to customize Sterling Selling and Fulfillment Foundation to meet your supply chain management needs. You will also learn how to extend transaction workflows and fulfillment pipelines, and how to move data between applications.

This course begins with an overview of Sterling Selling and Fulfillment Foundation technical architecture, including installation and deployment. Students are then introduced to APIs, Agent Framework, and Services Definition Framework.

Procedures to create, extend, and customize agents, agent servers, APIs, and services are taught. They will also learn how to extend the Sterling Selling and Fulfillment Foundation database and customize the Sterling Selling and Fulfillment Foundation User Interface.

Objectives: •Provide an understanding of the Sterling Selling and Fulfillment Foundation technical environment.

- Extend transaction workflows and fulfillment pipelines.
- Use the Sterling Selling and Fulfillment Foundation APIs to move data between Sterling Selling and Fulfillment Foundation and other applications.
- Create new agents and agentservers.
- Configure services.
- Customize the user interface, database, and printed documents.
- Extend the application screen using Web UI Framework.
