

## F145G

### IBM Case Foundation (Formerly FileNet BPM) 5.0 - Process Design

Durata: 5 gg

#### Descrizione

This course is for the workflow designer whose job includes responsibility for planning, designing, and implementing a business process solution using IBM FileNet Business Process Manager. The workflow designer works with IBM FileNet BPM Process Designer and other BPM tools to prepare process definitions that can be implemented in a production IBM FileNet BPM environment. During the solution design and development phases, the workflow designer works with business users to gather requirements, define workflow technical details and configuration settings, and create running process diagrams. During the solution deployment phase the workflow designer communicates the technical specifications of the BPM solution to the application developer and solution builder.

You work with a fully functioning, IBM FileNet Business Process Manager system to practice the skills required for planning, designing, and creating solutions to business process problems.

If you are enrolling in a Self Paced Virtual Classroom or Web Based Training course, before you enroll, please review the Self-Paced Virtual Classes and Web-Based Training Classes on our Terms and Conditions page, as well as the system requirements, to ensure that your system meets the minimum requirements for this course.
