Administering IBM Rational Quality Manager V4.0.4 Projects

Durata: 1 gg

Descrizione

This course introduces server administrators, project administrators, and test managers to the basics of administering IBM Rational Quality Manager projects. The course teaches how to set up projects, manage users and teams, assign roles and permissions, control access to project artifacts, and customize process implementation within a project. Hands-on lab exercises in the context of the Rational solution for Collaborative Lifecycle Management (CLM) reinforce learning.

IBM Rational Quality Manager is a key component of the Rational solution for Collaborative Lifecycle Management (CLM), providing quality management capabilities in a fully-integrated environment that can also include Rational Team Concert for change and configuration management, and Rational Requirements Composer for requirements definition and management.

Objectives: •Set up a Rational Quality Manager project

- Customize a project dashboard
- Manage users and teams
- Create roles and assign permissions
- Edit project properties (including artifact categories, custom attributes, and templates)
- Control access to project artifacts
- Define a project timeline and iterations
- Customize process implementation
