# **IBM Forms 8.0 Workshop**

Durata: 3 gg

### **Descrizione**

Do you need an effective method to capture and validate end user input, in real time, either from the Web or in stand-alone applications? Are you in an industry that requires an exact match to existing web applications or paper forms to meet government or industry regulations? Is there a need to upgrade the end user experience to eliminate input errors so that only validated and required data is collected by your application or service?

IBM Forms V8.0 automates forms-based business processes to help improve efficiency, customer service, and time to value making you more responsive to customer and market needs. IBM Forms V8.0 enables Line-of-Business and IT users to collect data and automate processes via agile web-applications, as well as classic document based forms applications in one nicely integrated package, which can also be utilized on iOS and Android tablet based devices.

A new key feature in IBM Forms version 8.0 introduces IBM Forms Experience Builder, which provides the following benefits to line of businesses and IT users:

- Exceptional web-based data collection applications
- •Easy-to-use, web-driven creation of compelling, data collection user interface
- •Lightweight routing for approvals and notifications
- CSS-based styling
- •Easy integration with REST Services via REST API

Objectives: •Learn about the key features provided in IBM Forms version 8 with the focus on the new IBM Forms Experience Builder.

- •Using the IBM Forms Experience Builder, you will learn to use the simple web-based user interface to:
- •develop interactive form driven applications
  - •integrate role based security
  - •implement the integrated lightweight routing for approvals and notifications
  - •explore personalized integration with WebSphere Portal
  - •leverage open standards utilizing REST API services

#### A chi è rivolto?

This intermediate course is designed for IBM Forms Solution Architects and developers.

## Prerequisiti

You should have:

- •Good technical understanding of Internet concepts
- •General understanding of object-oriented programming concepts, systems, and languages
- •Some knowledge of Web 2.0 concepts

Experience with XML and Java technology is desirable. Experience with IBM Forms development is recommended.

### Contenuti

- •Introduction to IBM Forms 8.0 and Forms Experience Builder (FEB)
- •IBM Forms Experience Builder (FEB) Overview
- •IBM Forms Classic vs. IBM Forms Experience Builder
- •LAB: IBM FEB UI Tour Introduction
- •LAB: IBM FEB Application Development
- •IBM Forms Experience Builder Custom Themes
- •LAB: Creating Custom Themes
- •IBM Forms Experience Builder Application Security
- •LAB: Exploring Application Security
- •FEB Personalization Integration with Websphere Portal (FEB Installation and configuration)
- •LAB: Integrating IBM Forms Experience Builder with WebSphere Portal
- •IBM Forms Experience Builder Architecture and Services Integration
- •FEB JavaScript API
- •LAB: FEB JavaScript API
- •LAB: IBM Forms Experience Builder REST API
- •IBM Forms 8.0 Classic Overview
- •IBM Forms 8.0 Classic Architecture
- •IBM Forms 8.0 Classic Forms Designer
- •LAB: IBM Classic Forms 8.0 Designer
- •IBM Forms 8.0 Classic WebForms Server vs. WebForm Viewer
- •LAB: Tour of IBM Forms Viewer
- •Integrating IBM Forms Classic with IBM Case Manager
